1.2 Programming Project

- Carlos: Design and developing of the initial implementation, development and optimization of the pre-processing for the levels, and debugging and testing.

- Miklós: Design and initial implementation of the heuristic function, including the Hungarian algorithm and tile distance measurement functions.

- Jacob: Debugging, experimented with filling large empty level sections with walls to reduce state space and tried implementing a POP-algorithm on the warmup planner.

- Magnus: Initial structuring of the planner, such as states, actions and communication with the server. Some work on the initial graph system which was later replaced. Debugging functionality, such as a simple profiler.

1.3 Notice

Arash Michael Sami Kjær (s193276) left the project at the start, reducing our group size to 4.
